Attorney Docket No.: 010971.52628US

## WHAT IS CLAIMED IS:

1. Combing ring for an opening roller of an open-end spinning arrangement, comprising at least two surface coatings, one applied on top of the other, of which the bottom one is a wear-resistant, harder coating, while the upper one is a less hard, but fiber-friendly coating having a maximum thickness of 5  $\mu$ m, wherein the bottom coating is applied as a PVD coating comprising so-called droplets and the thickness of the top coating measures at the least the same as the height of the droplets.

- 2. Combing ring according to claim 1, wherein the top coating is a chemically applied nickel coating.
- 3. A method of making a combing ring for an opening roller of an open end spinning arrangement, comprising:

forming a combing ring with combing structures thereon,

applying a first wear-resistant hard coating to the combing ring as a PVD coating comprising droplets having a droplet thickness forming unevenness in the total thickness of the first layer, and

applying a second less hard fiber friendly coating on top of said first coating, said second coating having a miximum thickness of  $5\mu m$  and a thickness at least as great as the droplet thickness.

4. A method of making a combing ring according to Claim 3, wherein the second coating is a chemically applied nickel coating.
